

# INSTALLATION HANDBOOK

## HORIZONTAL LIFELINE: Classic SurfaceLink Installation to Roof Sheet Surface

SafetyLink is an innovative anchor company achieving success and keeping you safe whilst working at heights.

-  ROOF ANCHORS
-  HORIZONTAL LIFELINES
-  PERMANENT LADDERS
-  LADDER STABILISERS
-  TEMPORARY ANCHOR

Read entire handbook before installing SafetyLink products. All products must be installed in accordance with SafetyLink's installation handbook, using only products supplied by SafetyLink Pty Ltd. Failure to follow all warnings and instructions may result in a serious injury or death.

**READ CAREFULLY SOMEONE’S LIFE DEPENDS ON IT**

- The building or structure for the anchorages should be assessed by an engineer, unless it is clear to a competent height safety installer that the structure is adequate.
- SafetyLink Height Safety Systems must only be installed as per our installation guides, to structures as specified in the installation manual for each product.
- All safety procedures must be complied with in accordance with the current safety code(s) of practice(s) for working at heights. Ensure safety at all times by being attached to suitable anchor points and approved safety equipment or approved scaffolding.
- Installation is to be carried out by, or under the supervision of a competent height safety installer.
- To prevent galling of non-permanent or adjustable stainless steel components use nickel anti-seize or similar boundary layer lubricant.
- Recommended waterproofing for roof tiles: *Sika Flex Co-Polymer Sealant*.
- Recommended waterproofing for metal roof: *Silicone Sealant Neutral Cure*.
- Recommended chemical anchor: Hilti RE500 or Hilti HY200 as per Hilti Product Supplement Data sheets.
- All bolt threads must be applied with Loctite 243 thread-locker prior to assembly. (IMPORTANT NOTE: Before applying Loctite 243 use Loctite 7471 primer to activate the surface according to manufacturer’s instructions).
- A personal energy absorber or a fall-arrest device with a personal energy absorber must be used in conjunction with all SafetyLink Anchorages and Lifeline systems.
- SafetyLink Horizontal Lifelines must be installed to roofs pitches no greater than 25 degrees.

**WARNING: SURFACE MOUNTED ANCHORS SHOULD BE POSITIONED NO LESS THAN 2 METRES FROM THE EDGE ON CLIP DOWN/STANDING SEAM STYLE ROOF PROFILES UNLESS ADDITIONAL SECURING OF ROOF SHEETING IS MADE.**

-  **MAXIMUM NUMBER OF USERS PER SYSTEM IS FOUR (4).**
-  **MAXIMUM NUMBER OF USERS PER SPAN IS TWO (2).**
-  **REFER TO SYSTEM INFORMATION FOR SITE SPECIFIC USE.**

SafetyLink®  
Innovative  
Fall Protection

**WARNING** 

Locking Hex Nut must be fully screwed up the thread of the eyebolt to expose 30mm of thread. This thread must be fully screwed into the bracket. **(Loctite must be used on all threads)**

Locking Hex Nut must be firmly tightened onto the bracket to stop the Intermediate T Bolt from unscrewing and to gain maximum strength.

# MAINTENANCE – PERIODIC INSPECTIONS

---

All items of equipment which are in regular use shall be subjected to periodic inspection and servicing.

These regular scheduled inspections and servicing must be carried out by a competent person (*refer to AS/NZS 1891.4:2009 if clarification required or contact SafetyLink*).

**SafetyLink Anchorages** (*In accordance with AS/NZS 1891.4:2009*)

**ALL ANCHORAGES MUST BE INSPECTED EVERY 12 MONTHS.**

Procedures to be followed at inspection time:

- Visually inspect anchors for signs of deterioration.
- The Single End Anchor and Intermediate T Bolts should remain straight, a bent Single End Anchor or Intermediate T Bolt will indicate that the Lifeline has arrested a fall (*The design features of the Single End Anchor and Intermediate T Bolts includes the ability to bend like a fishing pole starting from the top and working its way to the bottom, enabling it to use up energy as the Anchor bends whilst lessening the force on the person falling and the attachment point*).
- Visually inspect the components of the anchor for corrosion, superficial surface marking is permitted while deeper corrosion or pitting would require attention.
- Manually (by hand) check the Single End Anchor and Intermediate T Bolt for rigidity and tightness, if the Single End Anchor and Intermediate T Bolt can turn in the anticlockwise direction it will require attention.
- Visually inspect the attachment component of the anchorage where practically possible.
- Visually inspect the parent structure for modifications or deterioration which might lead to loss of anchorage strength.
- Check the full length of the stainless steel cable for any evidence of wear, cuts, looseness, extension, inter-strand wear, corrosion, stiffness, brittleness or fraying.
- Check the integrity of cable terminations and that lifeline tensioners are correctly adjusted (80kg/0.8kN/800N) and lock nuts are tensioned correctly.
- Check for the presence of contaminants or exposure to corrosive or extreme environment signs may include discoloration, crystallising or oxidation. These could significantly reduce the safe working load of the Lifeline.
- Run the Safelink Shuttle along the full length of the life line to verify its correct function.
- For Concrete Installation Only: To comply with Australian Standards, each Concretelink must be tested after installation and at every recertification inspection. Ensure you wait the recommended curing time as specified by the chemical anchor instructions. The pull test can be done using a 16mm threaded eyebolt. Test consists of ultimate pull out force proof loading to 50% of design purpose of anchorage.

IN ADDITION TO SAFETYLINK PTY LTD EQUIPMENT, ALL ANCILLARY EQUIPMENT MUST BE INSPECTED IN ACCORDANCE WITH APPLICABLE REGULATORY REQUIREMENTS AND THE MANUFACTURER'S INSTRUCTIONS.

**FOR MAINTENANCE ADVICE AND SERVICES PLEASE CONTACT SAFETYLINK**

**ON [+61 249 641068](tel:+61249641068) OR [1300 789545](tel:1300789545) FOR YOUR NEAREST SAFETYLINK INSPECTION SERVICE CENTRE

# WARRANTIES

## EXTRACT: SafetyLink Pty Ltd STANDARD TERMS AND CONDITIONS

- 11.1 To the extent permitted by law all implied conditions, warranties and undertakings are expressly excluded.
- 11.2 Except as provided in this clause the Company shall not be liable for any loss or damage, whether direct or indirect (including consequential losses or damage) arising out of any breach of contract by the Company or any negligence of the Company, its employees or agents.
- 11.3 Should the Company be liable for a breach of a guarantee, condition or warranty implied by the Australian Consumer Law (not being a guarantee, condition or warranty implied by sections 51, 52 and 53 of that Law) then its liability for a breach of any such condition or warranty express or implied shall be limited, at its option, to any one or more of the following.
- A) in case of Goods
- (I) the replacement of the Goods or the supply of equivalent Goods.
  - (II) the repair of the goods,
  - (III) the payment of the cost of replacing the Goods or acquiring equivalent Goods.
  - (IV) The payment of the cost of having the Goods repaired.
- Provided that any such Goods are returned to the Company by the Purchaser at the Purchaser's expense.
- B) in the case of services
- (i) the supply of the services again,
  - (ii) the payment of the cost of having the services supplied again.
- 11.4 The Company will not be liable for the costs of recovery of the Goods from the field, loss of use of the Goods, loss of time, inconvenience, incidental or consequential loss or damage, nor for any other loss or damage other than as stated above, whether ordinary or exemplary, caused either directly or indirectly by use of the Goods.
- 11.5 The Company warrants that at the time of shipment, Products manufactured by it will be free from defects in material and workmanship. In the absence of a modified written warranty, the Company agrees to making good any such defects by repairing the same or at the Company's option by replacement, for a period of (1) one year from the date of shipment. This limited warranty applies provided that:
- (a) defects have arisen solely from faulty materials or workmanship;
  - (b) the Products have not received maltreatment, inattention or interference;
  - (c) **the Products have been installed in accordance with the Company's Installation Handbooks using only products supplied by the Company;**
  - (d) accessories used with the Products are manufactured by or approved by the Company ;
  - (e) the Products are maintained in accordance with Australian Standard 1891.4 (section 9).
  - (f) you notify any claim under this warranty to SafetyLink in writing to the address below no later than 14 days after the event or occurrence concerning the product giving rise to the claim and you pay all costs related to your claim.

This warranty does not apply to any defects or other malfunctions caused to the Goods by accident, neglect, vandalism, misuse, alteration, modification or unusual physical, environment or electrical stress.

Please note that the benefits to the purchaser (as a consumer) given by this warranty are in addition to your other rights and remedies under the Australian Consumer Law. Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

- 11.6 If any goods are not manufactured by the Company, the guarantee of the manufacturer thereof shall be accepted by the Purchaser as the only express warranty given in respect of the goods.
- 11.7 Except as provided in this clause 11, all express and implied warranties, guarantees and conditions under statute or general law as to the merchantability, description, quality, suitability or fitness of the Products for any purpose or as to design, assembly, installation, materials or workmanship or otherwise are hereby expressly excluded (to the extent to which they may be excluded by law).

**PLEASE SEE SAFETYLINK PTY LTD FULL STANDARD TERMS OF CONDITIONS OF SALE FOR FURTHER REFERENCE.**

## INSTALLATION: HORIZONTALLY ON ROOF PITCHES BELOW 25 DEGREES

### **INSPECT THE INTEGRITY OF THE STRUCTURE AND ROOF SHEETING**

- Installation of anchors can only be made to roof sheeting strong enough to support the anchor point. Minimum roof sheet gauge is 0.42mm for steel and 0.7mm for aluminium.
- Roof sheets must be inspected thoroughly for splits, rust and corrosion damage.
- Ensure the roof sheeting and structure is secured in accordance with current Australian Building Codes. Ensure anchors are installed between a minimum of two purlins, with the roof sheeting being installed/screwed down as per manufacturers recommendations.

- ⚠ If any doubt exists as to the strength of the structure an engineer should make the assessment.
- ⚠ Surface mounted anchors should be positioned no less than 2 metres from the edge on clip down/standing seam style roof profiles unless additional securing of roof sheeting is made.

- Place Surface Mounted End Anchor in desired location to match holes with roof profile.
- Mark out position of Surface Plate on roof profile so it can be removed to install End Anchor.

## INSTALLATION OF A SAFETYLINK HORIZONTAL LIFELINE SYSTEM USING SURFACELINKS ON ROOF PITCH BELOW 25 DEGREES

### COMPONENTS

14mm Nuts

14mm Spring Washers

S Cable End Support

Single End Anchor Absorbing Bolt

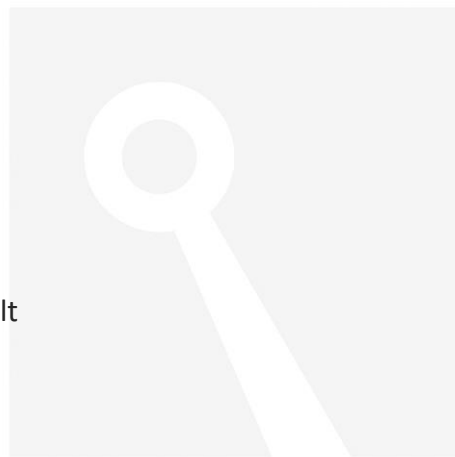

70mm Rubber Washer

Classic Surface Plate

70mm Plastic Washer

50mm SS Washer

16mm Nut

SafetyLink®  
Innovative  
Fall Protection

# CLASSIC SURFACELINK – SINGLE END ASSEMBLY

Product Code: STAT.ASURF002

## ASSEMBLING

### STEP 1

Apply adhesive waterproofing membrane under rivet location.

### STEP 2

Insert the Single End Anchor through 70mm Plastic Washer and Surface Plate.

### STEP 3

Apply a 70mm plastic washer, 50mm SS washer and 16mm nut to the underside of the Classic SurfaceLink Plate. Tighten the nut finger tight.

**Note: Use Loctite on all threads.**

### STEP 4

Tighten the 16mm nut.

### STEP 5

Install the S Cable End Support and tighten the 14mm nut and spring washer making certain the S Cable End Support lines up with run of the Lifeline. **Note: Use Loctite on all threads.**

70mm Plastic Washer  
50mm SS Washer & 16mm Nut

**NOTE: THREADS NEED TO HAVE A MINIMUM OF SIX FULL 360° TURNS INTO THE ULTIMATE THREAD.**

## INSTALLATION: HORIZONTALLY ON ROOF PITCHES BELOW 25 DEGREES

1. Place SurfaceLink on surface of roof sheets in required location.
2. Drill Ten (10) 8mm holes into roof sheets through locating holes on both sides of SurfaceLink (5 each side).
3. Secure the SurfaceLink to the roof by riveting through holes in surface mounted end anchor and roof sheet using 8mm Gesipa rivets.

**⚠** During installation you must be safe at all times.

Inspect the steel for strength.

Inspect how well the metal roof sheeting is secured to the structure.

Minimum steel sheet gauge 0.42mm.

Intermediate T Bolts must be spaced at **MAXIMUM 10 METRES** apart.

Ensure anchors are installed between a minimum of two purlins, with the roof sheeting being installed/screwed down as per manufacturers recommendations.

- ⚠** Surface mounted anchors should be positioned no less than 2 metres from the edge on clip down/standing seam style roof profiles unless additional securing of roof sheeting is made.
- ⚠** If any doubt exists as to the strength of the structure an engineer should make the assessment.
- ⚠** During installation you must be safe at all times.

# CLASSIC SURFACELINK – INTERMEDIATE ASSEMBLY

Product Code: STAT.ASURF001

## INSTALLATION OF A SAFETYLINK HORIZONTAL LIFELINE SYSTEM USING CLASSIC SURFACELINKS ON ROOF PITCH BELOW 25 DEGREES

### COMPONENTS

Intermediate T Bolt

Locking Hex Nut

Classic Surface Plate

70mm Plastic Washer

50mm SS Washer

16mm Nut

# CLASSIC SURFACELINK – INTERMEDIATE ASSEMBLY

Product Code: STAT.ASURF001

## ASSEMBLING

MAXIMUM DISTANCE BETWEEN INTERMEDIATE T BOLTS IS TEN (10) METRES.

NOTE: THREADS NEED TO HAVE A MINIMUM OF SIX FULL 360° TURNS INTO THE ULTIMATE THREAD.

*(IMPORTANT NOTE: Before applying Loctite 243 use Loctite 7471 primer to activate the surface according to manufacturer's instructions).*

### STEP 1

Apply adhesive waterproofing membrane under rivet location.

### STEP 2

Screw locking hex nut into Intermediate T Bolt leaving 30mm of thread (coat threads with Loctite).

### STEP 3

Insert Intermediate T Bolt through Classic SurfaceLink Plate.

### STEP 4

Apply 70mm plastic washer, 50mm SS washer and 16mm nut, tighten nut finger tight (coat threads with Loctite).

### STEP 5

Tighten nut and Locking Hex Nut making certain the Intermediate T-Bolt lines up with the run of the line.

# CLASSIC SURFACELINK – INTERMEDIATE ASSEMBLY

Product Code: STAT.ASURF001

## INSTALLATION: HORIZONTALLY ON ROOF PITCHES BELOW 25 DEGREES

1. Place SurfaceLink on surface of roof sheets in required location.
2. Drill Ten (10) 8mm holes into roof sheets through locating holes on both sides of the SurfaceLink (5 each side).
3. Secure the SurfaceLink to the roof by riveting through holes in surface mounted end anchor and roof sheet using 8mm Gesipa rivets.

### SETTING OUT PLAN

Inspect the steel for strength.

Inspect how well the metal roof sheeting is secured to the structure.

Minimum steel sheet gauge 0.42mm.

Intermediate T Bolts must be spaced at **MAXIMUM 10 METRES** apart.

Ensure anchors are installed between a minimum of two purlins, with the roof sheeting being installed/screwed down as per manufacturers recommendations.

- ⚠ Surface mounted anchors should be positioned no less than 2 metres from the edge on clip down/standing seam style roof profiles unless additional securing of roof sheeting is made.
- ⚠ If any doubt exists as to the strength of the structure an engineer should make the assessment.
- ⚠ During installation you must be safe at all times.

# CLASSIC SURFACELINK – SINGLE CORNER ASSEMBLY

Product Code: STAT.ASURF003

## INSTALLATION OF A SAFETYLINK HORIZONTAL LIFELINE SYSTEM USING SURFACELINKS ON ROOF PITCH BELOW 25 DEGREES

### COMPONENTS

Corner Unit

14 mm Nuts  
14 mm Spring Washers

Single End Anchor Absorbing Bolt

70mm Plastic Washer

Classic Surface Plate

70mm Plastic Washer

50mm SS Washer

16mm Nut

# CLASSIC SURFACELINK – SINGLE CORNER ASSEMBLY

Product Code: STAT.ASURF003

## ASSEMBLING

**NOTE: THREADS NEED TO HAVE A MINIMUM OF SIX FULL 360° TURNS INTO THE ULTIMATE THREAD.**

### STEP 1

Apply adhesive waterproofing membrane under rivet location.

### STEP 2

Insert the Single End Anchor through 70mm Plastic Washer and Classic SurfaceLink Plate.

### STEP 3

Apply a 70mm plastic washer, 50mm washer and 16mm nut to the underside of the Classic SurfaceLink Plate. Tighten the nut finger tight.

### STEP 4

Tighten the 16mm nut.

**Note: Use Loctite on all threads.**

# CLASSIC SURFACELINK – SINGLE CORNER ASSEMBLY

Product Code: STAT.ASURF003

## ASSEMBLING THE CORNER TUBE

*(IMPORTANT NOTE: Before applying Loctite 243 use Loctite 7471 primer to activate the surface according to manufacturer's instructions).*

### STEP 5

Secure Corner Unit into place using a 14mm washer and 14mm nut.

SafetyLink®

Innovative  
Fall Protection

# CLASSIC SURFACELINK – SINGLE CORNER ASSEMBLY

Product Code: STAT.ASURF003

## INSTALLATION: HORIZONTALLY ON ROOF PITCHES BELOW 25 DEGREES

### **MULTIDIRECTIONAL: SINGLE CORNER ASSEMBLY CAN BE ROTATED TO LINE UP IN ANY DIRECTION.**

1. Place Surface Mounted End Anchor in desired location to match holes with roof profile.
2. Line up corner tube with run of Lifeline.
3. Mark position of plate on roof profile ready for installation.

- ⚠ If any doubt exists as to the strength of the structure an engineer should make the assessment.
- ⚠ Surface mounted anchors should be positioned no less than 2 metres from the edge on clip down/standing seam style roof profiles unless additional securing of roof sheeting is made.

Product Code: STAT.ASURF003

## INSTALLATION: HORIZONTALLY ON ROOF PITCHES BELOW 25 DEGREES

⚠ Surface mounted anchors should be positioned no less than 2 metres from the edge on clip down/standing seam style roof profiles unless additional securing of roof sheeting is made.

1. Place SurfaceLink on surface of roof sheets in required location.
2. Drill Ten (10) 8mm holes into roof sheets through locating holes on both sides of the SurfaceLink (5 each side).
3. Secure the SurfaceLink to the roof by riveting through holes in surface mounted end anchor and roof sheet using 8mm Gesipa rivets.

- Inspect the steel for strength.
- Inspect how well the metal roof sheeting is secured to the structure. Minimum steel sheet gauge 0.42mm.
- Intermediate T Bolts must be spaced at maximum **10 METRES APART**.
- Ensure anchors are installed between a minimum of two purlins, with the roof sheeting being installed/screwed down as per manufacturers recommendations.

- ⚠ If any doubt exists as to the strength of the structure an engineer should make the assessment.
- ⚠ During installation you must be safe at all times.

# LIFELINE SYSTEM

## INSTALLATION: HORIZONTALLY ON ROOF PITCHES BELOW 25 DEGREES

1. Install *Swaged/Swageless Termination* to the cable in accordance with product guidelines. See [Appendix A](#).
2. Determine which end is most suitable to have the cable *Tensioner with Tension Indicator*. (Some lifelines may require a *Tensioner with Tension Indicator* on both ends). Connect the cable with *Termination* end to the *FrogLine End Anchor* top connection point. This will be at the opposite end to where the *Tensioner* end will be. (Ensure securing pin has been installed correctly).
3. Run the cable through *Intermediates* and *Corners* to the opposite end of the Lifeline system (Intermediates must be installed as per installation manual, **maximum distance between Intermediates is 10 metres**).
4. Connect *Swaged/Swageless Tensioner with Tension Indicator* to *FrogLine End Anchor* top connection point. (Do not attach *Tensioner* to cable at this stage).
5. Adjust the *Tensioner* out to the maximum safe length.
6. Match the cable along the side of the *Tensioner* and mark where to cut cable so that it will reach safely in to the *Tensioner* unit in accordance with product guidelines. [Appendix A](#).
7. Cut cable to length.
8. Install *Swage/Swageless Tensioner* fitting to cable as per [Appendix A](#). Connect *Tensioner* to *FrogLine End Anchor* top connection point (Ensure securing pin has been installed correctly).
9. Tension cable until the disc on the Tension Indicator can spin and indicates 80kg/0.8kN/800N.

## TIGHTENING TORQUE FOR SWAGELESS TERMINALS

Wire size:		Nm	Lbf ft
Ø 3	-	11	8.25
-	1/8"	11	8.25

# APPENDIX A – SWAGELESS/SWAGED FITTINGS INSTALLATION

## INSTALLATION

### BLUE WAVE®

Swageless SS Terminal 8mm 7x7, 7x19

Jaw housing  
Hauptstück

Jaws  
Backen

Brass Ring  
Messing Ring

Head  
Kopfteil

Make sure that the cable matches the terminal.  
The SS terminal use only for 8mm 7x7 and 7 x 19 Stainless Wire.  
Do no reuse jaws or house.

- 1 Slide the jaw housing in place on the cable.
- 2 Slide the jaws onto the cable, ensuring there is equal space between the jaws.
- 3 Place the brass pressure ring on the end of the cable. Make sure that the distance from the pressure ring to the end of the cable is 5-8mm.
- 4 Slide the jaw housing over the jaws.
- 5 The terminal can now be assembled. Screw the head on the jaw housing with a torque wrench – **min. 58 Nm (43Lbf ft)**, Tighten the lock nut with **min. 50 Nm (36 Lbf ft)**.

**Note:** after the first dynamic load the terminal **MUST** be tightened again. When assembling Swageless Terminals the breaking strength of the cable will be reduced by 0-15%.

The user is responsible for choosing the proper cable, and for correct assembly.

## APPENDIX A – CRIMPED FITTINGS INSTALLATION

1. Insert the cable into the open end of the fitting to be swaged, mark the cable where the cable and the fitting meet. Remove the cable and check that the mark is at least 84mm from the cable end.

2. Re-insert the cable into the fitting to distance previously marked. Start swaging the fitting from the closed end as shown above. Continue to swage as indicated above 5 times, first swage is 6mm from the depth indicator.
3. Ensure that you can no longer see the mark that was made in Step 1. Check the crimped sections are within the allowable tolerances using Vernier Callipers. (Allowable tolerances =  $11.10 \pm 0.2\text{mm}$ ).

### IMPORTANT NOTES TO REMEMBER

- ⚠ Ensure marked cable as indicated in step one is a minimum of 84mm.
- ⚠ Ensure all crimped sections (flat) are with 11.10mm, with a tolerance level of + or - 0.2mm. This distance should be the case of all 8mm 7 x 19 and 7 x 7 cable. The measurement should be taken with Vernier Callipers to ensure accuracy. If your measurements are outside the acceptable tolerance range this can be a sign of either a loss of pressure in your swaging tool or an indication that your dies are worn or incompatible. Any swaging that occurs outside the acceptable tolerances will need to be restarted using the appropriately amended tools.
- ⚠ When swaging the cable, the mark made in step 1 will disappear during the final swage due to the lengthening of the material during the swaging operation.
- ⚠ The swaged end has a mark indicating the end of the solid section of the unit and the start of the hollow section. Start swaging 6mm from the mark indicating the solid section.
- ⚠ When completed the swaged section should be a minimum of 80mm long. The dies are made with a 9mm wide section to crimp. These 9mm crimping sections need to be completed 5 times, that is there will be five flat sections along the swaged end. In between each crimped section you need to maintain a distance of between 5 and 6mm.

**DO NOT** swage the solid section indicated by the mark on the unit this will damage the swaging tool and the dies. (Marking the swaging depth on the end to be swaged unit (84mm from the opening will help to avoid this). To do this, use Vernier Callipers, checking the maximum size and minimum size.

# EXAMPLE: LAYOUT OF LIFELINE SYSTEM

## INSTALLATION: HORIZONTALLY ON ROOF PITCHES BELOW 25 DEGREES

All working at heights safety procedures must be complied with when installing SafetyLink height safety systems. For more information refer to your state or territories current legislation, regulations, policies and codes of practices. Horizontal height safety lifelines must only be installed and used by competent people with relevant current height safety qualifications.

SAFETYLINK HEIGHT SAFETY SYSTEMS MUST ONLY BE INSTALLED AS PER OUR INSTALLATION GUIDES, TO STRUCTURES AS SPECIFIED IN THE INSTALLATION MANUAL FOR EACH PRODUCT. SHOULD ANY DOUBT EXIST IN REGARD TO THE STRUCTURES INTEGRITY AN ENGINEER SHOULD BE CONSULTED.

# EXPERT FALL PROTECTION PLANNING

SafetyLink's design and planning team are here to help work out the positioning of your fall protection system, ensuring all areas of your roof are accessed safely.

Things to consider when planning your roof layout:

- Are all areas of your roof protected, allowing complete access when working at heights?
- Are you protected from the ground up, allowing complete access to your roof?
- Detailed comprehensive documentation provided e.g. installation guides, testing results, product sheets should be provided.
- SafetyLink can also provide you with a qualified and reputable installer of SafetyLink products.

Contact our design team at [info@safetylink.com](mailto:info@safetylink.com) and we can plan your fall arrest system for you.

SafetyLink®

*Innovative  
Fall Protection*

# IN CASE OF ACCIDENT

---

- ⚠️ **A FALL RESCUE PLAN SHOULD BE DEVELOPED PRIOR TO USING SAFETYLINK EQUIPMENT.**
- ⚠️ **PERSONS WORKING AT HEIGHTS SHOULD NOT WORK ALONE.**

It is critical that before using any SafetyLink Systems a fall rescue plan is in place for any persons suspended mid-air following a fall. Serious injury or death can occur in a matter of minutes, particularly if a person's movement or breathing is restricted or loss of consciousness has occurred. In accordance with your fall rescue plan and appropriate first aid procedures it is essential to remove the person from the suspended position as quickly as possible.

## IN ACCORDANCE WITH AS/NZS 1891.4:2009 CLAUSE 9.5

### EQUIPMENT WHICH HAS ARRESTED A FALL OR SHOWS A DEFECT

Any piece of equipment including both personal and permanently installed items, which has been used to arrest a fall or which shows any defect during operator or periodic inspection shall be withdrawn from service immediately and a replacement obtained if necessary. A label indicating the condition or defect should be attached to the equipment, and it should be examined by a competent person who will decide whether the equipment is to be destroyed or repaired if necessary and returned to service. In the latter case, details of any repair shall be documented, and a copy given to the operator.
