ABOUT US

Since our founding in 1998, SafetyLink has proudly grown into a global leader in fall protection systems, trusted across industries and continents.

We now have a footprint spanning from Europe to the USA and beyond, with our products in more than 35 countries worldwide. What sets us apart is our unwavering focus on innovation and simplicity - designing smarter, streamlined systems that make installation and use even easier.

In 2022, SafetyLink proudly joined the Delta Plus family, combining our expertise with a global safety powerhouse. Together, we're bringing Delta Plus products to the Australian market, expanding our ability to deliver comprehensive safety solutions while continuing our legacy in fall protection.

FastFit ACCESS SYSTEMS

Fast Installation

Supplied in sections for quick set out and minimal site work.

Strong Construction

Ladders built from high grade aluminium for reliable strength in tough conditions.

Easy Configuration

75° Ladder Kits and 90° Ladder Kits to suit a multitude of configurations, enabling effortless design planning.

Standards

SafetyLink's FastFit Access Systems are built to AS1657:2018 standards.

FastFit Modular System

SafetyLink's FastFit Modular System delivers permanent, compliant height access.

Fully modular components configure to straight runs, platforms and turns around obstacles. Lightweight to handle yet built for harsh sites, FastFit installs fast with minimal downtime and long-term reliability. From industrial plants to commercial roofs, it's a scalable, future-proof solution.

FastFit BRACELESS DAVIT

Three Boom sizes 1m, 1.6m and 2.2m

Four Mast heights 1m, 1.6, 2.2m and 2.8m

Concealed Fixed Floor Mount

FastFit

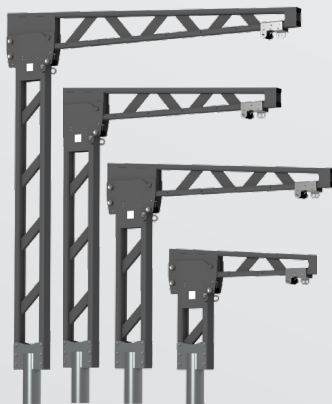

Braceless Davit

SafetyLink's Braceless Davit is designed with no front or back bracing, allowing placement in tighter locations where normal davits don't always fit. It provides safe, efficient access for raising or lowering workers, reaching easily over parapet walls and balustrades.

Australian-made, versatile and portable, it's rated for both fall protection and material handling.

Davit Sizes

Kits available with boom and mast sizes ranging from 1000mm to 2200mm, with the largest mast extending up to 2800mm.

Base Options

Fixed Floor Mount

Removeable Sleeve Floor Mount

Raised Fixed Floor Mount

Concealed Fixed Floor Mount

Fixed Wall Mount

Removeable Sleeve Wall Mount

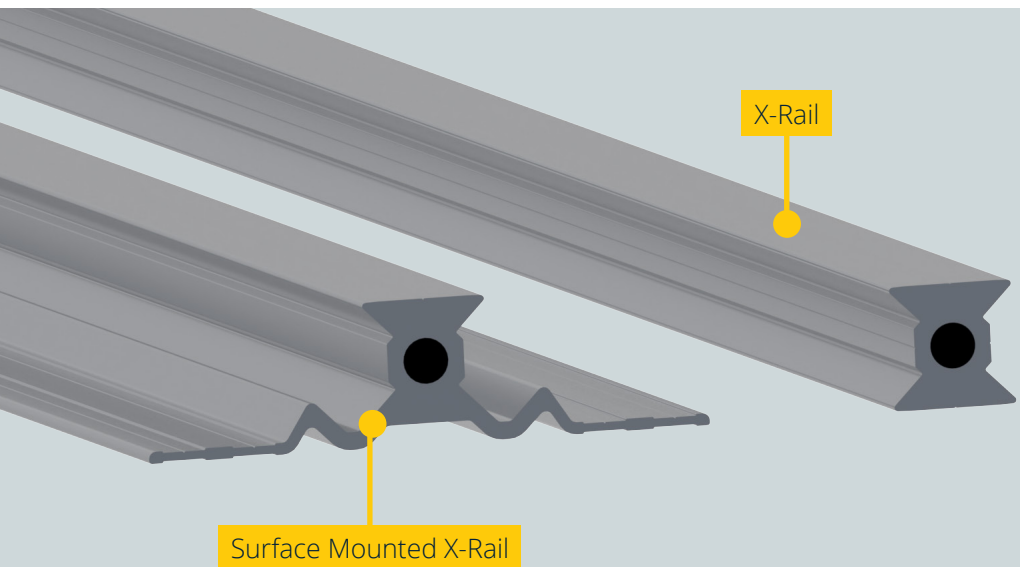

Bases available in Stainless Steel or Galvanised Steel.

Horizontal Rail System X-RAIL

The SafetyLink X-Rail is a compact horizontal rail system for personal fall protection, featuring one of the smallest height and width profiles on the market. Designed to support up to four users, it can be installed overhead, on walls or on floors, providing a versatile and discreet safety solution without compromising strength or reliability.

X-Rail **Ultra**

The SafetyLink X-Rail Ultra is a robust horizontal rigid rail system designed for personal fall protection in both fall arrest and abseil applications. Supporting up to four users at 150kg each, it can be installed overhead, on walls or on floors with up to a 5° incline. The system delivers fall arrest spans up to 10 metres and abseil spans up to 4 metres, with adjustable droppers available to resolve alignment challenges when supporting structures are difficult to line up.

Adjustable Droppers

Horizontal Lifeline FROGLINE

SafetyLink's horizontal lifeline systems deliver reliable fall protection for those working at height. Designed for smooth, uninterrupted movement, the system allows users to traverse along the lifeline without disconnecting. Every intermediate and corner component is engineered to let the shuttle glide effortlessly along the entire system. Our energy-absorbing design on the end anchors and intermediates reduces the force of a fall, allowing installation in a wider range of locations.

Plywood Mounted

Retro/Steel Mounted

Wall Mounted

OverHead **LifeLine**

When mounted overhead, SafetyLink's lifeline systems deliver continuous protection and effortless mobility across challenging areas. Supporting up to four users with spans of up to 10 metres, the system features larger shuttle wheels that navigate intermediates with ease, reducing the risk of tripping or disconnection.

Workers remain securely attached at all times, while integrated fall indicators and energy absorbers minimise forces in the event of a fall. Ideal for rooftops, walkways and elevated platforms, it combines safety, simplicity, and compliance in one robust solution.

DESIGN & SYSTEM PLANNING

Let us handle the heavy lifting. From concept to compliance, we manage the details so you don't have to.

SafetyLink's in-house design and planning team works with you to deliver bespoke, fully compliant roof and facade access solutions - complete with detailed layouts showing the placement of anchors, lifelines, davits, walkways and rails.

Contact our design team at info@safetylink.com to discuss your project requirements.

Innovation

Purpose-built systems and clever, compliant designs.

Design

SafetyLink takes care of the planning, delivering custom, compliant roof and facade access designs.

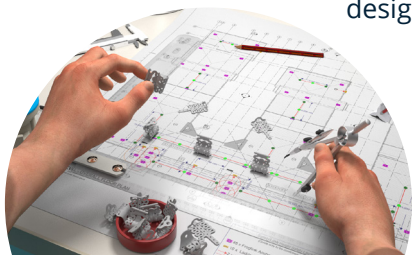

Training

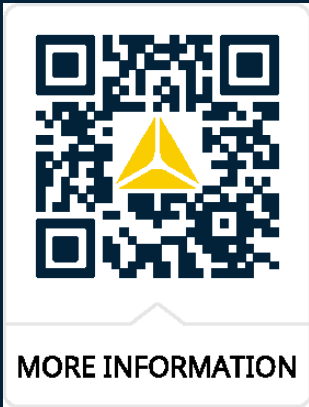

FREE online training for installers and users.

Support

Genuine support from real people, ready to help you by phone or email — every step of the way.
