

SafetyLink®

Wall & Ceiling Mounted Static Line

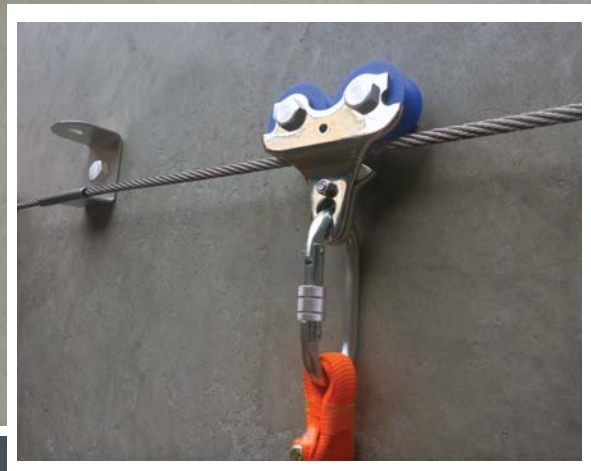

Static line wall or ceiling mounted for use on concrete and steel construction.

Uses:

- Cleaning & maintenance.
- Working on machinery.
- Loading trucks.
- Loading docks.

SafetyLink's Overhead Shuttle glides freely over the intermediates.

The wall and ceiling mounted static line can be either mounted into concrete or steel. The design of the static line utilises SafetyLink's superior energy absorbing components. The inclusion at the end anchors of SafetyLink's curved S-Bend reduces the risk of injury and damage to the structure in the event of a fall.

SafetyLinks patented overhead shuttle and intermediates have been designed as the ultimate pass through system allowing the shuttle to glide freely over the intermediates.
